

When the going gets tough, the tough, Get Going.

When it comes to using ignition wire sets in severe heat and driving conditions, Standard wires are ready to go. That's because they're engineered and manufactured to withstand the intense heat caused by searing underhood temperatures. What's more, Standard ceramic wire sets are up to the job for both heavy and medium duty truck engines with poor airflow. And with the extra long ceramic insulated boot design, they're perfect for engine heat generated by RV and agricultural vehicles.

So what are you waiting for.

Ceramic ignition wire sets.

Solid on heat. Solid on performance.

- ▶ extra long ceramic insulated boots that combat the high temperatures generated by these engines
- ▶ 260 °C (500 °F) silicone jacketed "Tiger Tail" wire prevents premature failure due to excessive heat
- ▶ built-in static suppressors protect against static failure
- ▶ metallic core conductor for exceptional durability
- ▶ extensive import and domestic coverage
